参加学会：The 2nd Asian Conference on Coordination Chemistry

会場：Jinling Riverside Conference Hotel, Nanjing, China

派遣期間：2009年10月31日～2009年11月5日

Thanks for the financial support from BMC Integrated Educational Program, I had the chance to join in the 2nd Asian Conference on Coordination Chemistry in Nanjing city, China. I had a poster presentation and visited the laboratories in Nanjing University.

Nanjing is the capital of Jiangsu Province and a city with a prominent place in Chinese history and culture. Nanjing has served as the capital of China for six dynasties. The weather in Nanjing is similar as Osaka. Unfortunately, it was very cold during those visiting days. It was said that there was not such low temperature in the recent fifty years in the early November. It was really cold. Nanjing University is one of the key comprehensive universities in China. And the research groups of coordination chemistry in Nanjing University are very strong, which construct the State Key Laboratory of Coordination Chemistry.

This conference is held every two years. The 1st conference was held in Okazaki, Japan. The purposes of this conference are to develop coordination chemistry, to promote collaboration and to encourage young coordination chemists in Asian countries and regions. About 600 researchers from 16 countries had joined in the 2nd conference this time, including the researchers from Russia and America. This conference covered modern advances and new trends in coordination chemistry, including organometallic chemistry, bioinorganic chemistry, supramolecular chemistry, nano-science and catalysis of metal complexes. It was a good chance for me to join in this conference, because I could know many excellent researchers and communicate with them and exchange our ideas. I have got much information which is valuable and helpful to my research. The participation of this conference is a good learning experience for me.

Here I would like to express my appreciation to the members of BMC Integrated Educational Program for award of financial support to me. And I also would like to give my gratefulness to my supervisor professor Takumi Konno, Dr. Kiyoshi Tsuge, Dr. Asako Igashira-Kamiyama and all the students in Prof. Konno's group.
